

McGowan Lake Campground Inc.

Trailer Moving Specifications – Schedule D

Before your trailer is moved into or out of the campground, please make sure the following is complete:

- 1) That your hitch is in good working condition. If you have an electric hitch, please ensure that there is a manual crank accessible in case the battery runs out of power
- 2) All of the tires are pumped up and holding air
- 3) All your connections are disconnected and put away (hydro, water and septic)
- 4) The trailer is off the blocks and the hitch is resting on a piece of 2 x 4 (or other small piece of wood – Note: not on a cinder block unless instructed otherwise by management)
- 5) Decks, sheds and all other items/debris need to be moved away from the trailer as far as possible. Everything needs to be removed from underneath the trailer

Once you are ready, a physical inspection will be completed by management before a moving date is scheduled.

****Any trailer move is subject to \$100.00 plus HST moving fee per way****
